Product Data Sheet

TPW51

Cd-rom, logiciel "transport pc", permet le téléchargement et la télémaintenance

Windows/DOS based software programme

The Aritech control & communication softwares are available in two versions: Windows, or DOS based packages that are simple to install and use. The windows version software uses the standard Microsoft Windows "look and feel", which makes it easy for those users familiar with Window's based products.
A big advantage is that one software package covers all of the CD control panels, diallers and the MPI 232.

Remote programming

Designed for remote programming, this software programme enables you to perform the task from any location.

Valuable trouble shooting tool.

This powerful tool makes remote system diagnosis and trouble-shooting easy.

Caractéristiques

Multiple security level of protection

The programme offers multiple security and authority levels for users¿ identification and, provides maximum access protection. Options may be allocated to users on a detailed level

Connecting a control panel

The dial-back option allows the operator to call the CD panel stating the customer ID code. After the panel accepts the ID code it will callback the PC. Entering a code at the control panel's keypad may also make a connection. The panel will then contact the management system.

Customer and system Database

In addition, you may record your customers, and details of their system configuration in a database, permitting you to quickly review their system.

U/D initiation message to central station

When the operator is connected to the CD Panel for up- or/and down-loading data, the Central Station may receive a remote programming initiation message.
